## OneShield Enterprise Solutions: Reinsurance Cession Management

In one centralized management registry, set up your reinsurers, register treaties, and track cessions of treaty and facultative risks.

Your core policy management system should look beyond policies alone and account for the influence of important market partners, such as reinsurers. That's why OneShield Software has included vital reinsurance handling capabilities that streamline the administration and management of reinsurance agreements since it was first launched into the marketplace.

We understand the important role that reinsurers play in the underwriting process and their role in the success of your business. With OneShield's Reinsurance Cession Management functionality, you will have the business intelligence data and administrative tools needed to work more closely with third-party reinsurers to expedite and facilitate the policy lifecycle, as well as manage overall risk.

OneShield makes it simple to register and manage reinsurers and cede business. Users can grant treaty or facultative authority to the Reinsurer Partner, and also register agreements, handle proportional and non-proportional treaty and facultative agreements, and tracks cessions by agreement or by reinsurer. Achieve an enterprise-wide overview of your relationships with reinsurance providers.

Simplifying your commission and billing processes, OneShield can also net out cession commissions, and issue reinsurance payments based on treaty descriptions and commission agreements.

At OneShield Software, we're technology experts with deep roots in the insurance industry. Our comprehensive portfolio of business applications is tailored for insurance industry leaders looking to reduce expenses, improve efficiencies and optimize service delivery every step of the way.

## OneShield's Reinsurance Cession Management Features:

- Ability to manage reinsurance cession, which is flexible, and can be configured to work with multiple third-party administration systems, in addition to OneShield Policy.
- Easily configured, based on individual insurer requirements, to calculate ceded/retained premium and ceded/retained limits, and commission for reinsurance treaty and/or program.
- OneShield supports quote share and excess of loss treaties, in addition to other industry standard types. The system can also be configured to have treaties specified down to the subject of insurance and/or coverage level.
- OneShield Policy produces Treaty and Facultative bordereaux for each reinsurance partner and creates the Account Payable.
- Ability to report reinsurance data to regulatory agencies, taxation authorities, and data collection participants.
- Automatic association of risks to treaties. This eliminates human error, and allows for systematic monitoring of treaty utilization and diminished capacity.
- Ability to manually associate risks to treaties and facultative reinsurance, which allows for exceptions to the preconfigured model.

## OneShield Software: Powerful Technology, Workflows and Tools

### Proven Technology Architecture

- **Scalable and data-centric**, OneShield uses stateless **Java EE** enterprise-class architecture for fast and simple changes to product definitions, workflows, rating and the object-model.
- **Built-in tools let you configure, test, version, release, transform data** for integration and more without writing code. The system easily **exchanges data** with dozens of applications using a variety of transport mechanisms and protocols.
- **Our proven implementation model** includes full training and support, plus a unique mentoring approach for ongoing assistance.

### OneShield Solution Add-on

#### OneShield Reporting:

- Provides near real-time data and reports for informed and timely decisions.

Feature rich reporting module provides dashboards, pre-defined cubes, standardized reports and ad-hoc reporting. Reporting content is based on subject areas, such as quotes, policy transactions, tasks and referrals.

### Powerful Portal Technology

- OneShield Portal enables web browser portal capabilities so you can provide agents, partners and/or customers with self-service capabilities, such as payment options and policy information.
- Various end-user roles and permissions can be defined for an agent/broker, underwriter, customer, reinsurer, system administrator, or service providers involved in processing aspects of an insurance transaction.
- Rules can be configured to define individual user functionality, and what each user can or cannot see — right down to the field level.

- Along with standard reports, cube and ad-hoc functionality allows for hundreds of customized reports. It fully supports the configuration of all management, financial, operational, statistical and marketing reports and the ability to generate regulatory reporting as required by a client or governing body.

## Lower your Total Cost of Ownership with OneShield Reinsurance Cession Management Handling

### Closely Monitor “Approved” Provider Relationships

- With centralized management of “approved” reinsurers for treaty and facultative reinsurance, you not only gain an enterprise-wide view of your relationship with each provider, you can also concentrate on negotiating the best rates and treatment.
- Conversely, you can diversify if you find too much reliance on one provider.

### Act, Don’t React, to Treaty Breaches

- With a standardized method for tracking reinsurance arrangements and the ability to track usage, you will have a single point of attachment for treaties and lower your risk for errors.
- OneShield gives you the capability to do an automated roll-up of treaty usage, providing a clear view on how much a treaty is being used — allowing for early reaction to a treaty breach.
- With automated warnings and task creation as treaty limits are nearing breach, you can be pro-active.
- This tracking ability can also help ease reconciliations with reinsurer systems for billing or coverage confirmation.

### Automate Payments and Statement Generation

- With OneShield, you can activate automated payment of, and statement generation for, reinsurance premium commissions (net cession).
- This functionality is used in conjunction with the OneShield Billing module, which enables you to create detailed statements and make payments to reinsurer providers based on treaty usage, as well as the usage of facultative arrangements.
- This reduces the need for manual reconciliation of reinsurer premium statements and provides clear traceability of all payments due to reinsurers — leading to improved auditability.

### Offer a Secure Web-based Portal to Reinsurance Partners

- OneShield allows you to open selected aspects of your system to providers through a secure Web-based portal.
- Facultative reinsurers can enter the portal and examine their book of business in detail, thus reducing your reporting requirements.
- Such transparency may also be used as a means to negotiate preferential pricing.
- Also, when facultative reinsurance is needed, the portal allows you to broadcast a task to one or more reinsurers via the insurer’s display “panel.”
- Reinsurers can then enter the system, and provide rates and conditions — helping your business lower transactional costs and open up more opportunities to your providers.

**Gain a competitive edge in the marketplace and enhance your reinsurer relationships with OneShield providing a relationship management tool for reinsurers that allows you to track performance and open up new opportunities for business.**
