**FOR IMMEDIATE RELEASE**

## **ICAT Selects OneShield Dragon® For Policy Management**

*Speed to Market and Flexibility Provide Leading Disaster Recovery Underwriters with Ability to Expand*

**Boulder, CO and Marlborough, MA – July 17, 2012 – [ICAT](#)**, a leading provider of property insurance to businesses and residences in hurricane and earthquake exposed regions of the U.S., and **[OneShield, Inc.](#)**, a provider of flexible, enterprise-class, content-rich policy and billing core systems for property/casualty insurers, are pleased to announce ICAT has chosen **[OneShield Dragon®](#)** as its policy management solution.

Achieving process efficiencies, increasing productivity and providing superior service to producers are critical objectives for ICAT's policy management replacement project. Enabled by Dragon's robust workflow engine, ICAT underwriters will have the ability to access an online, integrated underwriter workbench which will streamline and automate workflow to reduce processing costs and allow ICAT to deliver faster turn-around time to producers.

"We looked for a technology partner with extensive insurance expertise," said Mike Ferber, CIO for ICAT. "OneShield truly understands our unique business needs. With the flexibility that Dragon provides, we have the capability to migrate our products to a single platform which will simplify our technology landscape, improve our operating efficiency and allow us to focus on better service to our producers and clients."

With OneShield Dragon, ICAT will:

- Automate current internal processes including risk clearance, triage, risk-sharing assignments, underwriting, rating and quoting;
- Improve workflow efficiencies;
- Provide an enhanced underwriting workbench and collaborative underwriting toolset; and
- Streamline customer, partner and producer management.

"We are committed to collaborating with ICAT to support their ongoing business needs," said Tim Steele, senior vice president of U.S. client services and sales for OneShield. "Since ICAT is a very diligent underwriting organization, the implementation of Dragon will help them to automate manual processes and integrate relevant data from disparate systems into their underwriting workflow, leading to more effective evaluation, pricing and servicing of desirable risks."
